Participant Guide & Round 1 Handbook

Build Enterprise-Grade AI Employees using Supervity Auto

Join Discord: discord.gg/ET7Vc6aSNe

Welcome to the Autopilot Asia Hackathon 2026!

Build production-ready AI Employees using Supervity Auto alongside builders from across Asia-Pacific.

This handbook is the final source of truth for Round 1, covering timelines, submission requirements, evaluation criteria, and learning resources. Read it in full before you begin building.

About the Hackathon

Teams design AI Employees using Supervity Auto that:

- Understand business requests and follow enterprise policies
- Connect to external systems and execute workflows
- Handle exceptions and deliver measurable business outcomes

The best teams qualify for the finals at Asia Pacific University (APU), Kuala Lumpur.

Official Timeline

Date	Activity
17 July, 6:00 PM MYT	Problem Statements Released
18 July, 12:00 PM MYT	Round 1 Build Phase Begins
19 July, 12:00 PM MYT	Submission Portal Opens
20 July, 12:00 PM MYT	Submission Deadline & Build Ends
20–24 July	Evaluation & Judging
25 July	Finalists Announced (~120 Teams) & Round 2 Briefing

Round 1 Overview

A 48-hour online build challenge. Each team receives an official problem statement and builds a production-ready AI Employee using Supervity Auto. No submissions are accepted after the deadline.

Challenge Tracks

- Customer Support
 - Finance
 - Operations
 - Sales Intelligence
 - HR & People Operations
-

Round 1 Submission Requirements

Each team must complete the official submission form in full. Fields below match the live submission form exactly.

1. Selected Challenge Track

Dropdown, required: Customer Support / Finance / Operations / Sales Intelligence / HR & People Ops.

2–6. Team Details

Team Name, Participation Type (Solo / Duo), Team Member Full Name(s), Team Email ID(s), and Discord Username(s), all required. Solo teams enter one value per field; Duo teams enter both members'.

7. Operator URL

The Operator URL of your completed AI Employee. Ensure it is fully functional before submission.

8. Demo Video URL

A publicly accessible video link, 3–5 minutes, open to anyone with the link (no restricted or login-gated videos). Include: Problem Statement, Solution Overview, Live AI Employee Demonstration, Business Impact, Key Features.

9. LinkedIn Post URL

A public LinkedIn post using the same explanation as your video caption, tagging [@Supervity](#) and [@Vijay Navaluri](#), with hashtags **#AIEmployees #Supervity #SupervityAI #NoCode #AgenticAI #AutopilotHackathon**.

10. Submission Checklist

11. Declaration

Required: "I confirm this AI Employee was built during the official Round 1 window and this submission is our team's original work."

Evaluation Criteria

Every submission is scored 1–5 per category, weighted to 100 points.

Category	Weight — What Judges Look For
Business Output	40% — Clear impact, practical use case, quantifiable outcome, enterprise relevance, end-to-end automation
Technical Architecture	20% — Operator orchestration, parallel execution, branching, exception handling, retries, escalation, integration
Customizability	20% — Configurable without code: policies, thresholds, business rules, templates, routing logic
Demo & Console	20% — Live execution, working Auto App, professional demo, console usability, end-to-end workflow

Evaluation Process

- Submission validation (URLs and team details verified)
- Initial review (incomplete submissions may be disqualified)
- Technical evaluation against official criteria
- Final scoring, consolidated across judging panels
- Shortlisting — finalists announced 25 July

Round 1 Submission Checklist

Solve a real business problem, build a working AI Employee, configure AI Policies, handle exceptions gracefully, and demonstrate measurable business value. Test your Operator before submission and keep your demo simple and impactful.

Project

- ☐ Working AI Employee, correct Operator URL, selected track
- ☐ Team details complete: name, participation type, member name(s), email(s), Discord username(s)
- ☐ Business problem clearly solved

Demo & LinkedIn

- ☐ Public video link with live demonstration and business value explained
- ☐ Public LinkedIn post tagging @Supervity and @Vijay Navaluri with required hashtags

Validation

- ☐ AI Employee tested, Operator executes successfully, integrations verified
- ☐ AI Policies configured, exception handling demonstrated
- ☐ Declaration confirmed, all URLs publicly accessible

Final Note

The goal is not just to build an AI-powered solution, it is to create an AI Employee that delivers real business value. Solve meaningful problems, show measurable outcomes, and build something organizations can adopt in the real world.

Good luck, and happy building.
